A GREAT TIME - Tokyo department store installs world's greatest clock, covering entire front of building.

-Japan-

---

Picture.:- Another world beater ! From Japan this time ! The largest--

--clock ever ! The second hand is 28 feet long, yet the works are so delicate that it's--

--more accurate than the average watch. All the mechanism of--

--this clock is contained in the central axle which is so finely balanced that it moves the 28 feet hand--

--smoothly and without apparent effort. Its immense size has made it--

○ --quite famous, and people come from miles just to--

--set their watches by it. Well ! If a clock that size won't make for business punctuality, nothing will !
