

SWAT THAT FLY ! Now is the time to reduce the
possibilities of a plague of the prolific pest.

Picture.:- Here is a nice little fellow ! It's a
model of an--

--ordinary house fly ! Things like this--

--should be put on the spot at sight. Look at that
nasty--

--sucker affair. It first of all feeds on the--

--rotting refuse heap, and afterwards sits on your
food. It's hairy legs carry disease--

--bacteria and you swallow those--

--too ! Brrr ! Nice fellow ! -- Where's my
swatter ?
