"ROCKING" THE OCEAN ! - Great natural rocks used
in construction of mighty breakwater.

-Fort Stevens, U.S.A.-

Picture:- If all these rocks were put in one heap,
there would be a--

--nice new little mountain somewhere ! They are--

--building a new breakwater at the mouth of the great
Columbia River. The old one has been washed away--

--by rough seas. None of these rocks must weigh less
than twenty tons, or--

--the sea would whisk them away again like--

--pebbles, shifting sands would choke the--

--river with more sand, and--

--bring ruin on the river--

--ports. If you have never seen--

--a twenty ton splash before,--

--that's one ! Ten million tons--

--of it ! And two year's hard labour ! Then the breakwater
will be--

--properly on the rocks like me !
