CASTING REFLECTIONS - - U.S. army searchlight
section discloses hitherto carefully guarded war secret.

-New York-

Picture.:- After a period of secret experiments by the--
--United States Army, the details--
--of this grid reflector are published. By its--
--means the night sky is illuminated and mapped. Attacking--
--aeroplanes have little--
--chance of approaching unseen, and when spotted, become--
--targets which can be accurately focussed on--
--and shelled. The system of huge lamps and--
--reflectors gives light beams totalling a strength of about--
--three billion candle power.

Incidentally, by its light, a newspaper--
--can be read 25 miles away. It is rather reminiscent--
--of the idea successfully demonstrated in this--
--country a few months ago.
