

LONDON'S FALLING ! Our crazy cameraman sees the metropolis as it will be in about 10,000 years time - - if we are to believe the scientists.

Picture.:- The scientists are bent on cheering us up ! Their--
--latest joyful news is that London is going all--
--peculiar. St. Paul's will look something like this in 500--
--or so years. M.P.'s will have to cling--
--tighter than ever to their seats when the Houses of Parliament start slipping away.

Our beautiful County Hall, London's pride, may start--
--doing this. A distinct loss of dignity. Of course, you may not mind, but consider--
--what your great, great, great, great grand--
--children may think. They may get the idea that we meant it ! Fancy rushing across Waterloo Bridge--
--to catch the last train when it does this ! - - and sober mind you !

Even the safest bank in the world is threatened--
--they say. But the Bank of England is cunning. It is--
--hoarding up sinking funds !

St. Paul's isn't quite straight. The tilt is--
--noticed quite plainly by Scotsmen on New Year's Eve.

And - - well - - that's London that was !
