NERVES OF STEEL - - Daring airmen thrill great  
crowds with spectacular 'stunts' at Cleveland aviation  
meet.

-Ohio.U.S.A.-

---

Picture.:- An extraordinary picture of parachute precision--  
--jumping. The parachute is supposed to--  
--land in a circle painted on the--  
--ground. Apart altogether from nerve, great skill--  
--is required to make the fabric guide the jump.

Does he do it this time ? No he misses !

Here is a delayed jump ! A drop of two miles before  
pulling the parachute cord. Imagine the nerve required - -  
that's one to stop his headlong flight to earth - - and  
this is the other ! - - And if those two get mixed up  
with each other, the thrill will be a tragic one.  
Fancy doing this for choice !

His nerve is rewarded by a perfect landing - - er - -  
thank goodness ! Now--

--for the first time in history, an aviator loops  
the loop in an auto-giro. How's that ?
