

"TRANSFORMING" THE WORLD - Largest transformer ever made taken from factory to Liverpool for national electricity "grid" scheme.

- Lancashire -

---

Picture: British electrical plant works has beaten the world by making the world's largest High Tension Transformer. Rather like this little fellow you have --

-- in your wireless set but this one weighs a hundred tons ! It transforms and passes electrical --

-- energy, equal to one hundred thousand horse power ! If anyone happened to touch the --

-- output terminals when working, cremation wouldn't be necessary and a small urn would do for the ashes. The appliance is for the national electricity scheme plant. Removing it from Hellingwood, where it has been manufactured, to Liverpool, where it is --

-- to be installed, is a tremendous job. It will do the same sort of work as this small radio transformer, only much more so !
