AMERICA'S LATEST - Newest type of  
U.S. Army Bombing plane proves successful  
in test under "trying" conditions.  
- Washington -

---

Picture:- Conquests of the air proceeds even in the face  
of commercial depression. Here is America's newest and  
largest War bomber. After --

-- being tried out under the most rigid conditions, it proves  
itself to be one of the safest aircraft ever built. Below  
it in this --

-- picture are the famous snow qualmie Falls --

-- but the great height of the plane dwarfs --

-- the rapids into significance. The bomber can carry  
fourteen men equipped with munitions --

-- and guns, move at eighty miles per hour and climb eleven --

-- hundred feet a minute. It has a wing spread of seventysix --

-- feet, so the largest ever carage it occupies, is as big as  
the American garage should be !
