GIANT ALL-METAL 'PLANE - - M.Bleriot
displays huge French hydroplane destined
for Senegal-Brazil mail service.

-Suresnes-

Picture. :- The pioneer aviator, Monsieur Bleriot,
introduces his--

--new giant all-metal 'plane, which is to operate an--

--air service between Senegal and Brazil. Monsieur Bleriot
calls--

--it "the greatest effort of his aeronautical constructive
life". It is designed to carry forty passengers comfortably

--for five hundred miles without refuelling. For mails
it will have a non-stop radius of two thousand miles at--

--a speed of 130 miles per hour. Being a hydroplane,
it will alight with ease on land or water.

The construction has taken three years and it
is hoped that the trials will show it to be a safety--

--first air-passenger-carrier of the highest standard.
