NEW R.A.F. 'PLANE - - Introducing the new
tutor aeroplane intended for training Royal Air
Force pilots of the future.

-Woodford, Cheshire-

Picture.:- After exhaustive trials, the Air Ministry has
adopted this new tutor 'plane, for training R.A.--

--F.men as pilots. The Manchester district will benefit--

--from the three years contract gained for their manufacture.
Having seen it from the ground, let us--

--look at it in the air.

Every machine passes severe practical tests, undertaken
by Captain Brown, before it--

--is handed over to the Ministry.

For three years authorities have been making--

--comparitive tests of various--

--types of aircraft for this training work, and the makers
have every right to be proud of their success.

The machine is very stable, and extremely easy
to handle, and stops exactly where our camera-man wanted
it too!!
