

RAINING RICE ! Farmer adopts novel method  
of sowing rice seeds over wide area in quick  
time.

-California-

---

Picture:-

Seed planting is a very slow job ! This  
American farmer has invented a way to sow six  
acres in--

--ten minutes. Rice is to be the crop, and the  
grain--

--drops down a shoot. The shower strikes--

--a spreader immediately behind it which scatters  
the seed over the field. (PAUSE).

Six-hundred-pounds of grain are planted  
during each trip.

The scheme is expected to yield California  
one million--

----pounds more rice. Given a large quantity of  
milk--

--that should make quite a decent sized rice  
pudding.
