CYCLING ON WATER :      Edinburgh engineer  
tests vehicle built with the idea of crossing  
the Firth of Forth by water.

-Scotland-

---

Picture.:-

A Scottish inventor has made a testtotal cycle !  
It works exclusively on water !

He hauls it behind an ordinary pedal cycle  
to the riverside for its final tests on the Firth  
of Forth. Mr. Kenneth--

--Forbes, the young engineer, is not only the--  
--inventor, but the builder of the machine, so if  
it misbehaves itself and lets him down, he's only  
himself to blame. This hydro-cycle differs from other  
experimental designs in as much as it has propeller--  
--and not pedal propulsion. Now he's off, floating--  
--buoyantly and doing a speed of - - oh ! - - more  
than that ! I--

--should say ! Now he has tacked round and is  
pedalling down the home stretch on a wave of  
enthusiasm. He succeeds and proves that you may--

--lead a cycle to the water, but you can't make  
it sink.
