GLIDER "BABY".

Picture.:-

All of which means that Fraulein Hannah Reitsch is going to--

--exhibit her very own baby "Grunau". Although only a--

--week old, it can rise under its own power--

--with just a motor to guide it. Curiously enough up to a point wind agrees with it, and it doesn't mind being called a 'plain' baby !

(NATURAL SOUND)

A small motor-cycle engine in this glider makes it independent of a catapult or motor-car starting, and enables it to fly against the wind. It can be used in a similar way to an ordinary aeroplane. A clever baby ! Machine made, too !
