TUNNEL TO THE
SKY.
INNOVATION INTRODUCED AT CROYDON.
PROTECTION FROM WIND OF PROPELLERS.
-Surrey-

Picture:-

Another refinement for air travellers makes its first appearance--

--at Croydon Aerodrome. The gangway to the airship. Hitherto --

--boarding passengers have been nearly blown off--

--their feet by the draught created from the moving propellers.

Now all is comfort. Passengers enter the gangway tunnel, and walk in shelter to the--

--cabin of the plane. It's simple and convenient, and--

--nobody need get the wind up prior to the trip.

(EFFECTS).
