

## THE GREAT DROUGHT.

SERIOUS WATER SHORTAGE.  
MORE RAIN NEEDED.  
-England-

---

Picture:- In spite of the recent rains, drought  
is--

--many parts of the country is still severe. Teddington  
Weir is still--

--almost dry, and walking on the river bed--

--is a novelty for those who like a mudlark. Reservoirs,--

--like the rivers, are reaching a new low level record.  
Drinking water--

--is the danger. This, for instance, may--

--help washing-day, but as a thirst-quencher, it's--

--better left alone. Still, it means a--

--clean shift for his Sunday meetings.

For the moment, waste not ! Don't let your  
traps dip ! Turn off your taps !

Thank of others ! Doesn't matter how much  
whisky you have, but don't take more water with it.
