

AERIAL MONSTER

BUILT IN THE OPEN.
TOO BIG FOR A HANGAR.

-Rochester-

Picture.:-

The world's largest air-liner, I think. There's no hangar large enough--

--to house the giant, so its assembling has to be done outside, where the sky is--

--the limit. When completed it will take--

--its place in regular air route service. Thirty-nine passengers--

--can be accommodated in its cabin, and it will--

--also carry a crew of four. Its cruising speed with full load will be--

--something like 150 miles-per-hour.
