(1). Picture:- On the plains of Gharb, Arabs watch a new and terrifying spectacle. A short--

--circuit spark set fire to an oil well at Djebel--

--Tselfat, Morocco, and with that--

--flash the gusher went up in a roar of--

--smoke and flame. Up to now--

--it has been a poor well. Can this be extinguished before the spurt finishes. If so--

--it will mean a fortune. If not a big loss.

(2). Picture:- A village in New York is--

--hit by a wall of ice. Sudden thaw burst--

--an ice-bound river and the--

--water heaved tons of solid blocks through the--

--whole place. Railways, streets, fields and gardens--

--were piled with it. People heard it--

--coming and fled for their lives. Now--

--dynamiting is being tried to widen the water channel--

--and ensure against more ice being delivered free.

(3). Picture:- A machine has been invented to cut a--

--special non-skid tread on--

--car tyres. The chief--

--reason we show this picture is to indicate--

--the extraordinary happenings a movie cameraman is apt to encounter.

A non-skid demonstration was staged on--

--a wet skiddy road. The invention proved successful. The

1405322

car pulled up. The cameraman--
--continued turning, and caught this tragedy. (SCREAM).
