ENGINEERING FEAT.

CHESTER-HOLYHEAD ROAD NEARING COMPLETION.

---

Picture.:-

A marvellous piece of road building. The new  
Chester--

--Holyhead highway, near Llanfairfechan, is in parts  
cut--

--right through rock. Towered above the sea, it will--

-be one of the most costly stretches of road in England.  
Since June 1931--

--two-hundred and fifty men have been employed. The  
completed road will be ready for use in 1935. Three  
roads will be above each other, the railroad, the new--

--road, and the old road. The new one costs two-hundred  
thousand pounds. A trifle !
