

(CONT).

Picture:- Here's another story, where some fish escape death only--
--by seconds, and some don't. Fishers on the River--
--Tweed drop their--
--salmon nets for the first--
--round up of the season. The traps are yards--
--and yards long, and the encircling movement used by the fishers--
--doesn't offer much of a sporting chance to the unsuspecting--
--salmon. The haul on this occasion consisted of three fine fish,--
---roughly about six tins full. A more valuable--
--catch was made by Mr. Brewett when he bought his house--
--in Derbyshire. He found a coal seam in his back-garden. The
mine is only twenty-feet deep, and requires occasional baling--
--out. But that done, there's coal in--
--plenty. One-hundred tons have already been used from--
--it. It's a 'Derbyshire' bright idea. Don't you think, or
don't you? Mr--
--Brewett and his son tried to grow flowers as well, but the
flowers and the coal mine don't--
--get on well together. The coal used to give the blooming
lilies an awfully black look, so he--
--gave up the experiment. Oh, here's a--
--replica of Stephenson's experiment--
--in locomotives. The Rocket has--
--been made immortal--
--by a full scale replica--
--which has been presented--
--to the Science Museum, South Kensington. In 1829--
--the original won a--
--five-hundred pound prize as the best locomotive, and now it's
a Museum piece. How time flies!
