

(3). Picture:-

Nature story ! Warm weather approaches, and the moulting--  
 --season commences. Birds shed--  
 --their winter plumage, and reveal themselves--  
 --in an all together different garb, which is--  
 --decidedly attractive to the eyes of nature lovers.  
 Winter shyness disappears, and many will--  
 --come close enough--  
 --to feed from the hand, especially in the late evening.  
 There's great competition for fish--  
 --morsels, and oddments, with which they--  
 --occasionally feather their nests along the Florida coast.
