

225741

FLYING FLEA.

INSPECTED BY AIR CHIEF.

Picture:- The pocket aeroplane. Should be in every back garden.
So

simple a child can use
that
it, and all/sort of thing.

Flying for the million, Seems to be here. The flying flea receives attention even from Sir Philip Sassoon our Under-Secretary for Air. The machine has been invented, made, and flown, by Monsieur Mignet, French pilot. Its capabilities are demonstrated at Lympe. Can be sold for £70., does 70 miles per hour, and consumes about one gallon of juice every fifty miles. Soon the air may be alive with flying fleas hopping about. Instead of father sending an over adventurous son away with a flea in his ear, he will put one in his Christmas stocking. Vermin may become fashionable. "My dear, I can't stay. I've got to put on my fitting flea, and hop over to Mother's. Bug Ho !
