DD) Oh ! Here's more ice ! I thought I had finished with it ! The

Niagara Falls have been frozen solid for a week. This has never

before happened within living memory. So we may take it that at Niagara, it's pretty cold ! The unique scene attracts many visitors, but causes much dislocation of business. The ice has stopped water power for hundreds of manufacturing firms, and the stoppage of their plants is causing, in good American journalese, "a million dollars a day". In other words, it's a million dollars cold.
