

THE NEW ZEPPELIN
LA. 189 LAUNCHED.

2,055541

Picture:- 1909. An extraordinary cigar-shaped balloon affair called an air-ship arrives at Berlin. Astonished crowds greet it. It is the invention of one, Count Zeppelin. Great claims are made for this air Colossus.

The Kaiser meets the Count to talk over the possibilities of the air conquerer. The excitement is intense. The city is loyally en fete. Women have put on their latest fashions for the occasion. There were many sceptics in 1909. In 1936 air travel is a common-place.

Yes, this latest, newest and greatest air-ship of the world the "Hindenburg" commands the attention of all progressive nations. Its vast accommodation, which includes promenade decks, spacious lounges, and sleeping quarters for fifty passengers are a great advance on anything previously attempted. The excitement of 1909 is repeated, only the element of apprehension is absent, as the monstrous bulk slowly emerges from its hangar. Air travel is now an accepted fact.

(EFFECTS)

In a few weeks, this ship will be put into regular trans-Atlantic service. It can

land in any weather.

(EFFECTS)

Its length is

808-feet. Four

Diesel engines develop four-thousand-four-hundred horse power. It can cruise at nearly one-hundred miles per hour. Listen to the cheers which greet its rising. (EFFECTS)

Our microphones pick up the hum

of its engines. (EFFECTS)

(EFFECTS)

This is after twenty years of work. What marvels will the next twenty bring ?
