NIAGARA FALLS.

6/8/54.

Cracks that appeared in the ~~hitherto~~ ~~hitherto~~ hitherto solid
 rock of Prospect Point, recently pointed to the prospect of the water
 of Niagara having something ~~exhibited~~ with a bit more body ~~to~~ ⁱⁿ ~~with~~ it.
 This was a favourite spot for tourists to see the cataract --- so experts
 took the precaution of roping it off before an attempt was made to
 shore it up. Man's puny efforts at lifting the falling face of
 Dame Nature were of no avail; the cracks widened; with a roar, a
 hundred and eighty-five thousand tons of rock cascaded into the depths
 below.

So that gave Niagara Falls a new look ---

~~as this is the new look of Niagara Falls ---~~ after the biggest
 collapse since 1931.
