

ARMY VEHICLES.

1/10/54.

At a demonstration of British Military Transport at Chertsey in Surrey, the first emphasis was on independent suspension. These were the newest vehicles from the Ministry of Supply's Research and Development Establishment; --- and observers from many ~~foreign~~ countries were there to watch.

Among the most spectacular exhibitions were ordeals by water.

And another big advance in Fighting Vehicle Design was this prototype of a Conqueror heavy tank --- which is now the British Army's first tank powered by a jet engine.

Over to --- Germany. This is Amazon Annie --- the largest piece of artillery in the Army of the United States. With a range of about twenty miles it can fire ^{either} ~~with~~ high explosive --- or atomic shells.
